

BPF 2/3

Band-Pass Filter for the 160 MHz Band

DESCRIPTION:

- ★ The BPF 2/3 is a 3-helical resonator band-pass filter with aperture-coupling between the resonators.
- ★ This filter can be used as a preselector to protect a receiver against interference from transmissions out of the passband, or it can be used to reduce spurious output from a transmitter with up to 50 watts output power.
- ★ The filter can be tuned within the entire 144-175 MHz band. It has very small dimensions owing to the use of helical resonators. Careful design and choice of materials ensure reliable operation over a wide temperature range.
- ★ The housing is made of extruded aluminium, the chassis of steel, and teflon insulation has been used in the coaxial cables and in the connectors.
- ★ The filter is black vinyl coated to prevent corrosion.
